PROFILE

DevOps Engineer with 5+ years of professional experience in deployment automation, cloud infrastructure, and containerized applications. Hands-on skills in AWS, Terraform, Jenkins, Docker, and Kubernetes, supported by independent projects in cost optimization, troubleshooting, and observability. AWS Certified DevOps Engineer – Professional with an MSc in Cloud Computing.

EXPERIENCE

DevOps Engineer

Neosoft Systems & Cloud Services

Draft responsibilities below – confirm against actual work before submitting.

Jan 2025 – Aug 2026

Pune, India

- Maintained CI/CD pipelines for application builds, automated tests, and deployments; investigated pipeline failures and supported release rollbacks.
- Provisioned and maintained AWS infrastructure using Terraform, including compute, networking, storage, and IAM resources across application environments.
- Supported Docker and Kubernetes deployments, maintaining configuration, resource limits, health checks, and rollout procedures.
- Monitored application and infrastructure health using CloudWatch, Prometheus, and Grafana; investigated alerts and documented incident resolutions.
- Automated routine operational tasks using Python and Bash, and collaborated with developers to improve release procedures and infrastructure documentation.
- Maintained IAM permissions, Kubernetes RBAC, and application secrets to support controlled access to infrastructure and deployment environments.
- Managed release configurations across development, test, and production environments; coordinated deployment changes and validated application health after releases.
- Investigated Linux, networking, and container issues using logs and diagnostic tools; maintained runbooks for recurring operational tasks and recovery procedures.

Software Engineer – DevOps-focused

Zensar Technologies

Mar 2020 – Aug 2023

Pune, India

- Designed and maintained 25+ CI/CD pipelines, reducing deployment time from 45 minutes to under 10 minutes.
- Automated AWS and Azure environment provisioning using Terraform, reducing infrastructure setup time by 60%.
- Supported containerized microservices on Kubernetes using Helm, autoscaling, health probes, and controlled deployment strategies.
- Implemented access and deployment security controls, including IAM, RBAC, secrets management, and vulnerability scanning.
- Troubleshoot build, deployment, and infrastructure incidents, achieving a 98% deployment success rate and reducing mean time to recovery by 30%.
- Built monitoring and alerting using Prometheus, Grafana, CloudWatch, and Azure Monitor for 20+ services, improving incident detection and operational visibility.

PROJECTS

CloudSpend-Guard – AWS Cost Optimization

Independent Project – [GitHub Repository](#)

Aug 2026 – Present

AWS / Python / DevOps

- Built a platform that discovers EC2 and EBS resources, analyzes CloudWatch utilization and AWS pricing data, and generates cost-saving recommendations.
- Developed a React and TypeScript dashboard with Vite and a FastAPI backend using boto3; tested resource discovery and recommendation APIs with pytest.
- Provisioned infrastructure using Terraform and deployed containerized workloads to private Amazon EKS using Docker, Helm, ECR, VPC networking, and an ALB.
- Built GitHub Actions workflows for testing, image builds, and ECR publishing, using GitHub OIDC, immutable Git-SHA image tags, and least-privilege IAM.

KubeDiagnose – Kubernetes Diagnostics CLI

Independent Project – [GitHub profile linked above](#)

Kubernetes / Troubleshooting

- Built a Python command-line tool to diagnose Kubernetes workload issues, with workload and namespace selection through the diagnose command.
- Created demonstration workloads for CrashLoopBackOff, image pull failures, out-of-memory errors, failed probes, and scheduling issues to exercise troubleshooting scenarios.
- Documented command usage and diagnostic examples with screenshots to demonstrate investigation of common Kubernetes failures.

Telemetry-Lab – Observability Project

Independent Project – [GitHub profile linked above](#)

Observability

In Development – Planned Stack; Implementation Details to Be Confirmed.

- Defined an observability lab for application metrics, logs, and traces, with a planned stack of OpenTelemetry, Prometheus, Grafana, Loki, and Tempo.
- Planned a FastAPI application with PostgreSQL, Docker Compose, and Kubernetes to demonstrate the observability workflow.

CORE SKILLS

Cloud & Networking: AWS (EC2, S3, IAM, VPC, EKS, ECR, ALB), Azure, GCP

Infrastructure as Code: Terraform, CloudFormation, AWS CDK

CI/CD & Release Automation: Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, AWS CodePipeline

Containers & Orchestration: Docker, Kubernetes, Amazon EKS, Helm

Monitoring & Logging: Prometheus, Grafana, CloudWatch, Azure Monitor

Programming Languages: Python, Java, TypeScript, SQL

Frontend: React, Vite

Backend & APIs: FastAPI, boto3, REST APIs

Testing & Quality: pytest, Automated Testing, Linting

Scripting & Automation: Bash, Ansible, AWS Systems Manager

Operating Systems & Version Control: Linux, Git

Security & Access Management: IAM, RBAC, AWS Secrets Manager, GitHub OIDC, EKS Pod Identity

CERTIFICATION

AWS Certified DevOps Engineer – Professional

EDUCATION

National College of Ireland

MSc in Cloud Computing

Dublin, Ireland

2023 – 2024
